Key insights

- Mobile is used by more than three-fourth of the total users
- Less than one-fourth of students depend on web

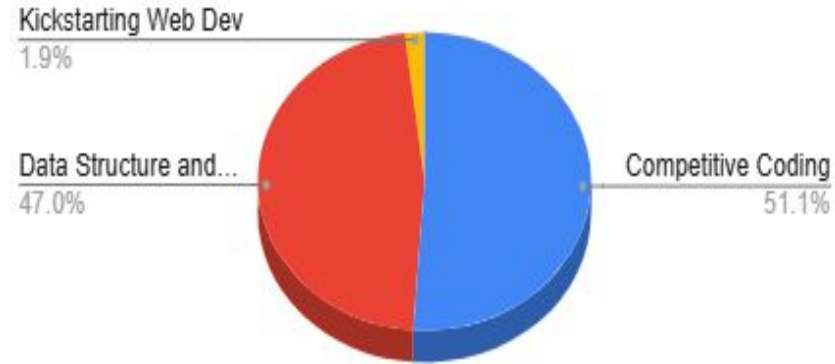

Business interpretations

- Users prefer compact, easy to access learning methods

Recommended actions

- Evaluate and improve the user experience in the mobile to maintain the user engagement.
- Optimize the web based platform and improve the user interface as well as ensure proper functioning.

Course popularity

Key insights

- The most popular course among users is Competitive coding
- Data structures and Algorithms also attracts many users
- Web development course is least popular among users

Business interpretations

- Popularity of the web development course is a point of concern

Recommended actions

- Redesign the course curriculum of Web development course to match the industry standards and ensure quality of the tutors.
- Consistently evaluate and maintain the quality of Competitive coding and Data structures and algorithms courses.

Summary

Key findings

- Edtech platform is well renowned in Northern and Southern regions
- Both CS/IT as well as Non CS/IT users are enrolled in the courses almost equally
- Most of the users are those who completed education recently or pursuing a full time course
- Course delivery via Mobile is more popular and impactful
- Web development course is least popular with very few students enrolled

Strategic recommendations

- Launch marketing campaigns in Eastern and Western regions
- To attract more diploma holders, collaborate with institutions which offers relevant diploma courses
- Ensure the course is relevant and understandable for all kinds of users
- Maintain the quality of delivery of course through mobile and ensure the best experience via web
- Evaluate web development course curriculum and redesign it to ensure quality

Skills demonstrated

- Data cleaning
- Use of string formulae
- Pivot tables
- Pivot charts
- Trend analysis
- Data driven decisions
- Business recommendations
